GOLD ORE
TO MY CUSTOMERS — GREETINGS
for

A HAPPY AND PROSPEROUS NEW YEAR

I take great pleasure in presenting this, my 18th annual catalog of UP-TO-DATE DAHLIAS, containing as it does so many wonderful new varieties, many of them my own creations, several of which have been pronounced as fine as any, by visitors in my gardens this season.

Thanking you for your generous orders, friendly letters, and the many new customers received through you by your kindly recommending of my roots to your friends, I am,

Yours very truly,

LOCATION

Dahlias will grow and do well most anywhere if well cared for, but there are conditions under which they seem to outdo themselves. Certain locations, kind of soil, and amount of care given to them have a lot to do with the results. Select a well drained location where the Dahlias will have the full benefit of the sun and wind most of the day. Avoid planting close to buildings, thick hedges, or under trees as much as possible. Never plant on low wet ground.

THE SOIL

Light sandy soil makes the ideal soil for Dahlias, in fact rather sandy or gravelly soil if well fertilized, will give better results than a heavy or rich one, which will produce a rank growth but few flowers. If soil is heavy, spade a lot of coal ashes into it. Do not be afraid of using too much. A top dressing of lime or land plaster every other season will improve both growth and the Blooms. On sandy soil a planting of rye in the fall, to plow under in the spring about every third year is very beneficial.

PREPARING THE SOIL

Use a liberal amount of manure or commercial fertilizer and plow or spade well into the soil, or the ground can be plowed or spaded first and the manure or fertilizer put in when planting, mixing thoroughly with the soil in or around hole or trench where the roots are to be planted.

On light soils use manure one year and fertilizer the next, but on heavy soils use manure once in three or four years for the best results.

PLANTING

Dig holes three feet apart each way or if garden is large enough plow trenches three feet apart. This will save a lot of hard work. The manure or fertilizer, if not plowed in, can be thoroughly mixed with the soil about the holes or trenches. Place the roots flat in their places with their growing shoot pointing up, covering about five inches deep. Do not plant until ground has become thoroughly warmed.

CARE OF PLANTS

Begin cultivation as soon as the plants are above ground and keep the soil well cultivated and free from weeds until plants begin to bloom. Dahlias that are well cultivated will require no watering. When plants are about two feet high tie securely to stakes to prevent breaking by heavy winds. A good plan is to drive stakes before planting. Cut Blooms frequently; do not let them fade on the plants. The more blooms you cut the more and better ones you will have.

DAHLIA PESTS

The dahlia has very few pests. Spraying with Nicotine will generally take care of the aphid and white flies. The cut worm is very fond of the young plants and destroys a great many, but where strong Field Grown Roots are planted the sprout will continue to grow or send up new sprouts. This makes the plants about two weeks later in blooming. The up-to-date method of fighting this pest is with Vermine. This is a liquid gas which when applied to the soil will penetrate all through it, destroying the cut worms and a great many other troublesome pests.

EUROPEAN CORN BORER

This is a new pest that if not taken care of will do a great deal of damage in the Dahlia gardens. They should be watched for during the growing season and destroyed, and all stalks should be burned as soon as dry enough after the roots have been dug. All other weed and plant stocks of any description should also be burned in the fall. Deep fall plowing or spading is also recommended. It is also a good plan to burn over the grass about the gardens in the spring. When cutting up the roots in the spring all stocks should be removed and burned.

FIELD GROWN ROOTS

Buy Field Grown Roots if possible. They are the most satisfactory as they always give the best results. There are a lot of Dahlia plants being sold now which cost as much as good roots and are generally a disappointment. They require a lot of care and a greater part of them are lost through one cause or other. My stock consists of Field Grown Roots only. Each root sent out is guaranteed to be a sound growing root that will prove true to name. Customers will please notify me at once if roots are not as guaranteed so that I may rectify any mistake. I intend that every customer shall be pleased with my roots so that they will remain customers and make me new ones by recommending my roots to friends.

ORDER EARLY

Send in your orders as early as possible as the demand for some varieties often exceeds the supply, especially the newer varieties. Your order for roots will be appreciated, whether large or small, and will be carefully filled and packed before shipping. All orders acknowledged when received and filled in order of receiving. Do not hesitate to buy on account of distance, as Dahlias go safely to any part of America by Parcel Post or Express. All roots delivered free at prices quoted in catalog with the exception of the unnamed collections. Customers wishing to pay the express on roots will receive more than enough extra roots to pay for the extra cost to them. **PLEASE USE THE ORDER SHEET WHEN ORDERING.**

SUBSTITUTING

When out of any variety ordered I do not substitute unless satisfactory to the customer. Where this substituting is left to me I always send the nearest in color, often a better variety, never a lower priced or inferior flower.

REMITTANCES

Cash must accompany all orders. Remittances may be made in the form of P. O. Money Order, Express Money Order, Registered Letter, or Personal Check. Small amounts will be accepted in U. S. postage stamps.

FREE ROOTS

When ordering, if customers will send me a few names of friends who they think would be interested in my catalog, I will remember them with some extras for their kindness.

CARE OF ROOTS

Soon after the frost has killed the foliage cut the stalks off close to the ground. Select a warm sunny day when digging and allow them to dry in the sun most of the day. Handle them with care as they are easily damaged. When thoroughly dry place them in the cellar, arranging in a close pile with the stalks down, as they keep better in this way. Cover with dry soil or anything to exclude light and air. If cellar is heated they must be covered or they will dry up.

In the spring when they begin to sprout they should be divided for planting. Use a strong knife, cutting down through the stalk dividing the clump in halves, then separate each root, care being taken to have a part of the crown as it joins the stalk left on each root. Plant only one root to a hill.

HOW TO KEEP BLOOMS

Dahlia blooms for exhibition should be cut late in the evening or very early in the morning. Select blooms that have freshly opened and place the stems into boiling water for about 12 seconds and then immediately into cold water. Keep in a cool place until wanted.

BLOOMS FOR EXHIBITION

Stake the plants, use a liberal amount of rotted manure and cultivate frequently. Bone meal worked into the soil about the plants when beginning to bud is very beneficial. Allow only one stalk and remove all but the main bud on each stem. If soil is dry give them plenty of water, but soak the ground thoroughly about the roots.

NAMED VARIETIES

For the benefit of the customer not familiar with the names, colors, or types of the Dahlia, and wish to have me make the selection for them, I make the following Special Collections. These are made up from the very finest varieties that I can give at the prices, and have always given perfect satisfaction to those that have bought them. When ordering, if there are any favorite classes or colors preferred, mention them. Names of varieties must be left to me. Each Dahlia is labeled and guaranteed to prove true to name.

DAHLIAS GROWN FROM SEED

Dahlias will bloom from seed the first year. They can be started early under glass and transplanted to the open ground the last of May. Or they can be planted in the open ground about the first of June and the greater part of them will bloom before frost. It is a great pleasure to watch them grow and see the new blooms open, every one different. The new wonders of today are grown from seed in this way.
